Bashar Rimawi

AI Engineering

Telecommunication Engineering graduate with a strong foundation in Python and AI, complemented by 9 months of intensive training through UniHance and Green Circle, along with hands-on experience developing an independent AI project. Skilled in algorithmic problem-solving, model implementation, and building AI pipelines. I am motivated about developing practical AI solutions and continuously expanding my expertise in artificial intelligence.

Education

Bachelor's Degree in Telecommunication Engineering
Al-Balqa Applied University, College of Engineering and Technology | 2022 | GPA: 3.1/4

Language

- **Arabic: Native**
- **English: Intermediate**

experience

Green Circle | AI & Technology Trainee
September 2025 – December 2025

- Participated in a 3-month technology and professional development program.
- Collaborated with a team to design and develop a machine learning project using Python.
- Presented the project and communicated technical findings to instructors and peers.
- Applied structured problem-solving and project planning throughout the development process.

UniHance | AI Engineering Trainee
January 2025 – June 2025

- Completed a rigorous 6-month AI Engineering training program focused on practical AI implementation and software development fundamentals.
- Developed practical experience in data preprocessing, data cleansing, and data transformation using Pandas and NumPy to prepare datasets for machine learning.
- Built, optimized, and evaluated machine learning pipelines using Scikit-learn.
- Created data visualizations with Matplotlib to analyze datasets and evaluate model performance.

Skills

- Programming & Backend: Python, SQL, FastAPI, Pydantic
- AI & LLM Engineering: LangGraph, Prompt Engineering, Agentic Workflows, LLM Architecture
- Development Tools: Git, GitHub, Docker, Jupyter Notebook, VS Code
- Operating Systems: Linux, Windows
- Professional Skills: Problem-Solving, Technical Communication, Cross-Functional Collaboration

Project

Independent AI Project | AI Developer

(March 2026 – June 2026)

- Designed and implemented a standalone AI system using Python over a 3-month development cycle.
- Built a modular architecture to support efficient data processing and maintainable code.
- Collected, cleaned, and preprocessed datasets to improve model training quality.
- Debugged system behavior, evaluated model outputs, and refined performance through iterative testing.
- Managed source code using Git and GitHub with documented project milestones.

Certification

AI Certification – Ministry of Digital Economy and Entrepreneurship (in collaboration with Unihance)
